

ARTY BUNDLE

WEBSITE DESIGN PRICE GUIDE

Your expectations, and the requirements, for your web site will be very personal so it's always best to discuss things with us to find out exactly what's achievable within your budget, however the following is intended to provide a starting point for those discussions.

Standard Websites:

A custom design with no additional programming requirements. Cost largely depends upon how many pages the client requires, but typically a site of up to ten pages will cost from £300

Additional Functionality:

You may require a website that has a security log in or perhaps includes a forum or guestbook for example - this is what we term as 'additional functionality'.

Cost depends upon the number of pages and the functionality you require but would be approx. £400 - £750

Sophisticated Websites:

Websites that act in conjunction with client databases. Those that contain Flash elements or video clips. Cost here largely depends upon programming requirements, and the range of effects you wish to achieve, so we like to discuss these with you so that we can give you the best possible product to match your needs.

Ecommerce Websites:

Ecommerce websites, or on-line shops, cost slightly more due to the complexity of the programming. They require a database to store the products and the facility to process payments on-line through services like Paypal, or Protx. Our Ecommerce sites cost from £950
